

The City is divided into seven Pavement Maintenance Zones, 1 through 7. The City generally schedules pavement maintenance projects in each successive Maintenance Zone on a five to eight-year cycle for the following reasons.

- Arterial streets are to be maintained more frequently due to higher traffic volume.
- The two arterial zones receive maintenance every 5 to 6 years.
- The five residential zones receive maintenance every 8 years.

In other words, each Maintenance Zone would typically receive maintenance once in the appropriate time frame. The work may include projects such as Slurry Seal, Asphalt Overlay, or Reconstruction. This does not mean that every street will receive treatment. The type of pavement treatment may be dependant on competing pavement needs and budget constraints. The City strives to provide effective pavement maintenance needs by efficient use of available funds received specifically for pavement maintenance purposes. The schedule is as follows:

Pavement Maintenance Program - Zone Maintenance Schedule							
	Reoccurrence Interval	2008	2009	2010	2011	2012	2013
Zone 1	8 Years						
Zone 2	8 Years						
Zone 3	8 Years						
Zone 4	8 Years						
Zone 5	8 Years						
Zone 6 - Principal Arterials	5 Years						
Zone 7 - Minor Arterials	6 Years
